Healthy Brain Network EDUCATE Program

ATTENTION NYC Metro-area families: Special opportunity for children with reading or math difficulties!

We have a clinical trial opportunity that offers at-home, online educational games for your child or student that may improve their reading and math skills!

NYC-area children aged 6-10 who score below average on a reading assessment given as part of the Healthy Brain Network assessment may qualify to enroll in a research program at the Child Mind Institute called EDUCATE. Families will be offered priority to enroll in the Healthy Brain Network and, if eligible, to be fast-tracked through a combined Healthy Brain Network – EDUCATE program.

What is the combined Healthy Brain Network-EDUCATE program?

Before enrolling in EDUCATE, your child first must complete the Healthy Brain Network study assessment.

THE HEALTHY BRAIN NETWORK is a community-based research initiative offering no-cost, diagnostic, comprehensive mental health and learning evaluations to children. **Healthy Brain Network evaluations include intelligence, academic, social-emotional, attention and reasoning skills assessments.** [See how it compares to a neuropsych.](#) Participating families receive a detailed report of their child's assessment, including scores, recommendations and referrals when appropriate. This report can be used to inform treatment and shared with school for an IEP or 504 plan..

EDUCATE is a research program studying the effectiveness of computer-based learning games delivered in the home on improving academic skills in young children. In this program, children will receive **at least 12 weeks of no-cost, individually paced reading and math skill-building computer games.** Families will get a tablet and headphones they'll use throughout the program and keep when done, and a comprehensive academic skills assessment.
